## Getting Started

⌘ Light This is an example of how you may give instructions on setting up your project locally. To get a local copy up and running follow these simple example steps.

## Prerequisites

This is an example of how to list things you need to use the software and how to install them.

- git

```
#Debian
sudo apt install git

#RHEL
sudo dnf install git
```

## Installation

Clone the repo

```
git clone https://github.com/marcossilvestrini/templates.git
cd templates || exit
```

## Usage

Use this space to show useful examples of how a project can be used. Additional screenshots, code examples and demos work well in this space. You may also link to more resources.

[\(back to top\)](#)

## Roadmap

- ☐ Feature 1
- ☐ Feature 2
- ☐ Feature 3
  - ☐ Nested Feature

See the open issues for a full list of proposed features (and known issues).

## Contributing

☐ Light Contributions are what make the open source community such an amazing place to learn, and create. Any contributions you make are **greatly appreciated**.

If you have a suggestion that would make this better, please fork the repo and create a pull request. You can also simply open an issue with the tag "enhancement". Don't forget to give the project a star! Thanks again!

1. Fork the Project
2. Create your Feature Branch ( `git checkout -b feature/AmazingFeature` )
3. Commit your Changes ( `git commit -m 'Add some AmazingFeature'` )
4. Push to the Branch ( `git push origin feature/AmazingFeature` )
5. Open a Pull Request
